Whilst every effort is made to ensure the accuracy of this list, Thatcham Research can accept no liability or responsibility for any incorrect omissions or inclusions.

Issue 110: OCTOBER 2022

INTRODUCTION

The vehicle security systems listed in this document have been evaluated by Thatcham Research at Thatcham as directed by the Insurance Industry's Steering Group. Evaluation against *"The British Insurance Industry's Criteria for Vehicle Security",* supported by *"Performance Test Specifications",* has indicated that the security systems are judged to comply with the said Criteria and are thus listed subject to a review after twelve calendar months. The list will be updated as and when further security systems are judged to have successfully complied with the Criteria.

The Systems are listed under a number of generic categories as follows (LCVs, Plant in brackets):

PASSENGER CARS, LCVs, PLANT

Category 1: [L1] [P1]	COMBINED ALARM AND IMMOBILISER
Category 2: [L2] [P2]	ELECTRONIC/ELECTROMECHANICAL IMMOBILISER
Category $2 \rightarrow 1$: [L2 $\rightarrow 1$]	ALARM UPGRADES (GENERAL APPLICATION)
Category 4:	WHEEL LOCKING DEVICES
Category S5:	VEHICLE TRACKING SYSTEMS
Category S7:	ASSET LOCATION SYSTEMS

MOTORCYCLES

Category MC1:	COMBINED ALARM AND IMMOBILISER
Category MC2:	ELECTRONIC/ELECTROMECHANICAL IMMOBILISER
Category MC2→1:	ALARM UPGRADE

NOTIFICATION OF SECURITY SYSTEM COMPLIANCE

PART I

1. A BRIEF DESCRIPTION OF THE LISTED SYSTEMS

PASSENGER CARS, LIGHT COMMERCIAL VEHICLES AND PLANT

Category 1	Combined Alarm & Immobiliser	CAT 1
[L1]^ [P1]		
Key Features	 Alarm with full perimetric and volumetric detection Immobiliser isolating a minimum of 2 operating s Anti-scan, anti-grab resistance of key codes. Coded fuel valve for L1. 	
Category 2	Electronic/Electromechanical Immobiliser	CAT 2
[L2] ^A [P2]		
Key Features	 Immobiliser isolating a minimum of 2 operating s Anti-scan, anti-grab resistance of codes. Coded fuel valve L2. 	ystems, passively armed.
Category 2 \rightarrow 1	Alarm Upgrade (General Application)	CAT 2 \rightarrow 1
[L2 → 1] ^A		
Key Features	 Alarm with full perimetric and volumetric detection Anti-scan, anti-grab resistance of key codes. Upgrades a fitted category 2 system to full category 	

RISK MANAGEMENT ADVICE – VEHICLE RISK

High Risk	-	Cat 1
Medium Risk	-	Cat 2

^A LCV's have an L prefix for the category classification. Electrical/ Electromechanical immobilisers have a coded fuel valve suitable for diesel immobilisation. Aftermarket passenger car [Cat2] electronic immobilisers are not appropriate for diesel vans. Cat L2 can also provide optimum protection for diesel passenger cars.

^B Effectiveness depends highly upon the fitting method and on the vehicle to which they are fitted. A well installed mechanical immobiliser can be very robust.

FEATURE CODES 2.

Each listing entry will have an alphanumeric "keycode" attributed to it to describe features. The format is as follows:

- [Key] [Circuits] [Diesel] [Special Detection] [Extra Facilities] [Systems Immobilised] [Fixing Method] •
- •

Electronic Systems

Кеу			Special Detection		
R T C K KE	- - -	Remote Transponder Contact Keypad Keyless Entry	U M N B I IF	- - - -	Ultrasonic Microwave Infra Red Glass Break Inclination Infrasonics
Circuits Isolated			Extra Facilities		
2 3 4 S	-	Two Circuits Three Circuits Four Circuits Software Lock	L E O G	- - -	Central Locking Electric Windows Secure Override Gearlock
Diesel Vehicles					
D 12 24	- -	Suitable for Diesels 12 Volt 24 Volt			

Vehicle Applications

Pa	ssenger Cars (Mainly petrol)		Lig	ht Commercial Vehicles (Mainly	/ diesel)
• • • •	Saloon Hatchback Estates MPV Convertibles Coupe Off Road	Categories 1, 2, 2 →1, 3	• • • •	Car derived High – cube Microvans Pick-Ups Panel & Box Vans 2 Axle Rigid Trailer Protection	Categories L1, L2, L2 →1, L3
			•	Industrial equipment and machine electrical systems and diesel engine wheels or tracks	, ,

3. GLOSSARY OF VEHICLE SECURITY FEATURES

Alarm

This system sounds an audible possibly visual warning when the vehicle is tampered with.

Battery Back Up

A siren that has its own battery, which allows the alarm to continue to sound even if the car battery is disconnected.

Bonnet Locks

These lock the bonnet of the car, preventing thieves from attacking the engine compartment.

Coded Audio Equipment/ ICE

The radio/stereo has a secret code, which stops the radio from working if stolen.

Coded Fuel Valve

The valve shuts off the fuel supply to the engine and requires a sophisticated code to run the vehicle. Ideal for diesels.

Dead Locking

This disables the normal lock functions and prevents a thief opening the car from the inside by breaking the window and operating the release handle or button.

DIY Security Markings

You – the vehicle owner, can mark your name and address in hidden parts of the vehicle, e.g. inside door skins, under the seat frames, using Dymo tape, ultraviolet pens, cards or similar. This helps to identify stolen vehicles.

Glass Break Detector

This sets off the alarm if a thief breaks a car window.

Glass Etching

All the glass on the vehicle, sometimes including headlamps, is etched with the vehicle's registration number and/or Vehicle Identification Number.

Immobiliser

An immobiliser stops the vehicle from being driven away. There are two types:-

- 1. Mechanical: These lock either the steering wheel, gear Lever or pedals in position.
- 2. Electronic: These disable the vehicle's electrical system and Engine.

Inclination Sensor

This sets off the alarm when it senses the vehicle is being raised of jacked up to tow the vehicle away or steal the wheels.

Microwave Sensor

A volumetric sensor designed to reduce the possibility of false alarms on soft top vehicles

Paging

A paging device sends a signal to the owner, telling him the car is being attacked or stolen.

Passive Arming

The alarm/immobiliser is switched on automatically when you leave the car.

Perimeter Protection

If a thief opens any doors, boot/luggage areas or the bonnet, the alarm will go off.

Radio Key (Remote Control)

A tiny radio transmitter, which may operate the alarm/immobiliser and/or door locks.

Random Code

This protects against "grabbing" as the Radio Key uses a different code each time the system is set and unset.

Locking Wheel Nuts

These help prevent a thief from stealing the wheels using a standard wheelbrace.

Side Screen Protection Film

A strong plastic film stuck over the side windows. This helps to prevent smash and grab theft attacks.

Thatcham Vehicle Security

Thatcham is a non-profit making organisation set up by Insurers to investigate the cost of repair after accident and to test original equipment and aftermarket security systems. Fitting a Thatcham tested system to a vehicle dramatically reduces the risk of theft.

Tracking Systems

Tracking devices fitted to cars send out signals, which help the police locate the vehicle if stolen.

Total Closure/ Central Locking

Enable the whole car (doors, boot, sunroof) to be locked with just one operation of a key or remote control.

Touch Key

A key which operates the alarm/immobiliser, by direct contact with keypad.

Transponder

This is a uniquely coded identification microchip, which can be used in an immobiliser key to help prevent a vehicle from being stolen.

VIN – Vehicle Identification Number

A unique 17 digit number, stamped on various parts of the vehicle. Before purchasing a vehicle, check the VIN markings for signs of tampering.

Visible VIN – 17 Digit

Number viewed from outside the vehicle adjacent to the lefthand windscreen pillar (passenger side).

Volumetric Sensor

This sets off an alarm if a thief enters the vehicle.

4. PASSENGER CARS

Category 1 Alarm/Immobiliser (Original Equipment Systems)

Note for Insurers: All original equipment systems, standard or option/retrofit, are applicable forK dealer specification vehicles only.

5. SPECIAL NOTE ON ADDITIONS AND DELETIONS

Adding and Deleting Systems

System names are periodically added to the list based upon those systems which have complied with the Criteria. From time to time systems will be <u>deleted</u> from the list. There are two possible reasons for this:

- The system has ceased to be available. The system <u>may</u> or <u>may not</u> be replaced by another system with a different name. Deleted systems may be superseded by new systems.
- The system is not maintaining compliance with the Criteria or is exhibiting high warranty or theft experience in the field. The Production Audit process may illuminate non-compliances.

Deletions may be effected <u>instantly</u> at any listing. In order to clearly point out deletions they will be listed separately.

Important: If a <u>significant</u> safety or security issue is raised, leading to a system deletion, Thatcham will immediately issue a "Deletions Bulletin" to all Member Companies advising them of the situation.

Recommendations to Insurers for handling deletions

It is recommended that Insurers adopt the following approach for dealing with deletions:

• From the designated deletion date, do not recognise the deleted system for new business.

For existing customers <u>continue</u> to recognise the system indefinitely as a valid system <u>or</u> continue to recognise it if it was fitted prior to application for insurance cover (new customers).

Note: <u>Normally deleted systems</u> should still attract insurance discounts and concessions but only if installed prior to the issuing of the current listing

Special Deletions Bulletins

If a "Special Deletions Bulletin" is issued for a system, Insurers may choose not to recognise previously installed systems as appropriate.

THATCHAM LISTED SYSTEMS - INTERNATIONAL COVERAGE

Many Thatcham Insurers tested and recognised systems can be available in countries other than the UK:

- All Standard Fit new vehicle systems listed should be available in the Countries of the European Union and Europe in general check with vehicle manufacturer for verification.
- New vehicle Option Fit systems may be available throughout Europe
- Many new vehicle retrofit and used vehicle Aftermarket systems may be available across Europe

Additionally as a general principal, Thatcham listed systems may be available in any country where the listed suppliers are present. Many of the listed suppliers operate world-wide and enquiries should be made to these companies to establish availability outside the UK.

Finally it should be carefully noted that the correct name and ideally the Thatcham Evaluation number should be assigned to any product for positive identification.

6. GENERAL NOTES

- 1. This list is primarily communicated to the ABI, LMUA and Thatcham Member Companies.
- 2. This list supersedes and replaces any previously released Listing.
- 3. Whilst every care has been taken in compiling the information in this publication, Thatcham Research accepts no responsibility for the completeness or accuracy of any statement, process, procedure or specification contained therein.
- 4. All listed systems have successfully completed Phases 1, 2, 3 and 4 of the Compliance Procedure and as such are considered to afford a satisfactory level of security and reliability, having been comprehensively validated to a high level.
- 5. The status of all systems shall be reviewed after a period of 12 months to ensure that changes can be monitored, conformity of production is maintained, warranty returns are minimised, and there is no evidence that the system is generally being overcome in the field.
- 6. In compliance with the Criteria, no markings indicating the model or serial number of the system shall be visible from outside the closed vehicle. This shall also exclude branded window stickers. (Not applicable to mechanical immobilisers).
- 7. The fitting of any listed system provides a degree of protection which should be appropriate to the theft risk, but does not guarantee against the theft of the vehicle or of its contents.
- 8. Insurers are requested to remind policyholders to consult with their insurance company prior to having any system fitted.
- Installers or dealers shall be equipped to conduct periodic system functional tests on request from the insurer or policyholder in order to demonstrate continued vehicle protection.

Issue 110

- 10. A number of the listed systems may not immediately be available at the time of publication. Manufacturers should be contacted to confirm date of availability.
- 11. The list will be updated regularly to account for system additions, deletions or changes in Vehicle Manufacturers' Fitment Policy. It is the system or vehicle manufacturer's responsibility to provide updates of this information to Thatcham as required.
- 12. Insurers are requested to ensure that their recognised systems carry the <u>exact correct name designation</u> as those listed. Claims of compliance for systems with marginally different name designations should <u>not</u> be accepted. In addition, each listed system has a unique Thatcham Evaluation No. This should be quoted to identify a system.
- 13. All (Category 1, 2, 2→ 1 and 3) listed systems are specifically designed to be installed in passenger cars (M1 class, up to 9 seats total). All (Category L1, L2, L2→ 1) systems are specifically designed to be installed in light commercial vehicles [N1 and N2 class, 12V only].
- 14. All listed electronic systems are appropriate for vehicles with +12V or +24 (negative earth) power supplies.
 - T L1 and L2 Systems on the LCV listing are particularly suitable for commercial vehicles due to their robust diesel immobilisation utilising a coded fuel valve (and at least one additional circuit) isolation.

Category L2 systems with coded valve immobilisation are recommended for application to protect diesel powered passenger cars and may provide a level of performance exceeding that of Category 2 only.

It should be recognised that immobilisation of a diesel-engined vehicle by conventional means <u>may not</u> be as robust as immobilisation of the equivalent petrol version. Immobilisation of some older and simpler diesel engines by some listed Category 1 and 2 systems can be difficult to achieve effectively. Hence the recommendation to fit Category L1 and L2 systems for these risks.

- 15. A number of alarm systems may not be suitable for installation in convertible (soft-top) vehicles; check with manufacturer or installer for guidance or choose an alarm with microwave type detection.
- 16. Category [L] 2→1 General Alarm Upgrades should be specified for where there is already a fitted Category [L] 2 system on a particular car. A Category [L] 2→1 system should not be fitted on its own without adequate Category [L] 2 immobilisation. As the system is not permitted to connect to the original base immobiliser, the system User will have to operate 2 security system keys. (Although one may be the original driver's transponder key). This may marginally affect system ease of use.
- 17. No modifications of listed systems are permitted which may affect their performance. Manufacturers and installers are not allowed to substitute sensors or other components on a compliant system. This shall include original vehicle equipment that forms part of the system such as engine management control units.
- 18. A number of the Category [L] 2 systems may have a limited alarm capability which has not been certified to the level of Category [L] 1.

If these systems are to be upgraded using a Category $[L] 2 \rightarrow 1$ Alarm Upgrade to achieve full Category [L]1 status, then the upgrade alarm equipment shall take priority over the original alarm equipment when installed.

- 19. It is recommended that, wherever possible, insurers do not discriminate between systems in the same Category. Each system has the same minimum achieved level of security meeting the Criteria. Members of the Public may choose higher feature/specification systems as appropriate for their circumstances.
- 20. The List is generally updated every two three months.
- 21. Listed systems generally attract insurance premium discounts from many insurers. Some insurers may refuse to offer theft cover if no system is fitted. The level of discount and the recognised categories of system vary from insurer to insurer. Discounts may vary from 2% to 25% with averages of about 5 15%.
 - T Only applications for evaluation in accordance with *Criteria Issue 3* systems are now being accepted. Issue 1 & 2 systems will in due course be replaced by Issue 3 systems, which are tested to a higher level.

Thatcham listed systems exceed the requirements of European Vehicle Security legislation and British Standards and are specifically designed to meet the higher requirements demanded by Insurers.

PART II

A BRIEF DESCRIPTION OF THE LISTED SYSTEMS 1.

MOTORCYCLES

Category MC1	Combined Alarm and Immobiliser	125cc – Upward			
Key Features	 Alarm with ECU protection, ignition and inclination detection, battery backed-up siren. Immobiliser isolating a minimum of 2 operating systems, passively armed. Anti-scan, anti-grab resistance of key codes. 				
Category MC2	Electronic/Electromechanical Immobiliser	125cc – Upward			
Key Features	 Immobiliser isolating a minimum of 2 operatir Anti-scan, anti-grab resistance of codes. 	ng systems, passively armed.			
Category MC2→1	Alarm Upgrade	125cc – Upward			
Key Features	 Alarm with ECU protection, ignition and inclina Anti-scan, anti-grab resistance of key codes. Upgrades a recognised Category MC2 system 	. , .			

FEATURE CODES 2.

Each listing entry will have an alphanumeric "keycode" attributed to it to describe features. The format is as follows:

- [Key] [Circuits] [Special Detection] [Extra Facilities] [Systems Immobilised] [Fixing Method] •
- •

Electronic Systems

Кеу			Special Detection		
R T C K	-	Remote Transponder Contact Keypad	S M I EP	- - -	Shock Microwave Inclination ECU Protection
Circuits Isolated			Extra Facilities		
1 2 3 4 SL		One Circuit Two Circuits Three Circuits Four Circuits Software Lock	G SO CS	-	Gearlock Secure override Compact systems

3. GLOSSARY OF SECURITY FEATURES

Alarm

This system sounds an audible possibly visual warning when the vehicle is tampered with.

Alarm Upgrade

The addition or enhancement of an alarm function to increase the protection afforded by a Motorcycle Security System.

Battery Back Up

A siren that has its own battery which allows the alarm to continue to sound even if the motorcycle battery is disconnected.

Coded Fuel Valve

This valve shuts off the fuel supply to the engine and requires a sophisticated code to run the motorcycle.

Compact

The components of the Motorcycle Security System are integrated into a single unit.

DIY Security Markings

You – the motorcycle owner, can mark your name and address in hidden parts of the motorcycle, e.g. inside door skins, under the seat frames, using Dymo tape, ultraviolet pens, cards or similar. This helps to identify stolen motorcycles.

ECU Protection

A signal by a detector, sensing an opening or interference within an area specific to the Motorcycle Security System.

Panel Etching

All the panels on the motorcycle, sometimes including headlamps, is etched with the motorcycle's registration number and/or Motorcycle Identification Number.

Immobiliser

An immobiliser stops the motorcycle from being driven away. There are two types:

- 1. Mechanical: These lock either the wheels, brake disc, chain, or anchor the motorcycle to a secure surface.
- 2. Electronic: These disable the motorcycle's electrical system and engine.

Inclination Sensor

This sets off the alarm when it senses the motorcycle is being raised from its centre or side stand.

Microwave Sensor

A volumetric sensor designed to reduce the possibility of false alarms, due to atmospheric changes.

Paging

A paging device sends a signal to the owner, telling him the motorcycle is being attacked or stolen.

Passive Setting

The alarm/immobiliser is switched on automatically when the ignition is switched off.

Radio Key (Remote Control)

A tiny radio transmitter which may operate the alarm/immobiliser.

Random Code

This protects against "grabbing" as the Radio Key uses a different code each time the system is set and unset.

Thatcham Motorcycle Security

Thatcham is a non-profit making organisation set up by Insurers to investigate the cost of repair after accident and to test original equipment and aftermarket security systems. Fitting a Thatcham tested system to a motorcycle dramatically reduces the risk of theft.

Tracking Systems

Tracking devices fitted to motorcycles send out signals, which help the police locate the motorcycle if stolen.

Touch Key

A key which operates the alarm/immobiliser by direct contact with keypad.

Transponder

This is a uniquely coded identification microchip, which can be used in an immobiliser key to help prevent a motorcycle from being stolen.

VIN – Motorcycle Identification Number

A unique 17-digit number, stamped on various parts of the motorcycle. Before purchasing a motorcycle, check the VIN markings for signs of tampering.

Volumetric Sensor

This sets off an alarm if a thief enters an enclosed or protected area within the motorcycle.

Wheel Away Detection

Detects forward or rearward movement of the motorcycle, or the rotation of 180° by a road wheel.

4. THE LISTING OF SYSTEMS JUDGED TO COMPLY

5. GENERAL NOTES (Motorcycles)

- 1. This list is primarily communicated to the ABI, LMUA and Thatcham Member Companies. It is further distributed to Motorcycle Manufacturers, Security Equipment Manufacturers, Government bodies, Police Forces, Trade bodies and other Research Organisations. Public and Media enquiries should normally be directed to the ABI.
- 2. Whilst every care has been taken in compiling the information in this publication, Thatcham Research accepts no responsibility for the completeness or accuracy of any statement, process, procedure or specification contained therein.
- 3. All listed systems have successfully completed Phases 1, 2, 3 and 4 of the Compliance Procedure and as such are considered to afford a satisfactory level of security and reliability, having been comprehensively validated to a high level.
- 4. The status of all systems shall be reviewed after a period of 12 months to ensure that changes can be monitored, conformity of production is maintained, warranty returns are minimised, and there is no evidence that the system is generally being overcome in the field.
- 5. In compliance with the Criteria, no markings indicating the model or serial number of the system shall be visible from outside the Motorcycle.
- 6. The fitting of any listed system provides a degree of protection which should be appropriate to the theft risk, but does not guarantee against the theft of the Motorcycle or of its contents.
- 7. Insurers are requested to remind policyholders to consult with their insurance company prior to having any system fitted.
- 8. Installers or dealers shall be equipped to conduct periodic system functional tests on request from the insurer or policyholder in order to demonstrate continued Motorcycle protection.
- 9. A number of the listed systems may not immediately be available at the time of publication. Manufacturers should be contacted to confirm date of availability.
- 10. The List will be updated regularly to account for system additions, deletions or changes in Motorcycle Manufacturers' Fitment Policy. It is the system or Motorcycle Manufacturers responsibility to provide updates of this information to Thatcham as required.
- 11. Insurers are requested to ensure that their recognised systems carry the <u>exact correct name designation</u> as those listed. Claims of compliance for systems with marginally different name designations should <u>not</u> be accepted. In addition, each listed system has a unique Thatcham Evaluation No. This should be quoted to identify a system.
- 12. The Motorcycle Manufacturers' Fitment Policy section specifies standard fit systems on UK Specification models. **Insurers are advised to cross** check if these models have a worldwide fitment policy.
- 13. All (Category MC1, MC2 and MC2 →1 listed systems are specifically designed to be installed on Motorcycles of 125cc upward.
- 14. All listed electronic systems are appropriate only for Motorcycles with +12V (negative earth) power supplies.
- 15. Category MC2→1 General Alarm Upgrades should be specified for where there is already a fitted Category MC2 system on a particular Motorcycle. A Category MC2→1 system should not be fitted on its own without adequate Category MC2 immobilisation. As the system is not permitted to connect to the original base immobiliser, the system User will have to operate 2 security system keys (although one may be the original owner's transponder key). This may marginally affect system ease of use.
- 16. No modifications of listed systems are permitted which may affect their performance. Manufacturers and installers are not allowed to substitute sensors or other components on a compliant system. This shall include original manufacturer equipment that forms part of the system, such as engine management control units.
- 17. A number of the Category MC2 systems may have a limited alarm capability which has not been certified to the level of Category MC1.

If these systems are to be upgraded using a Category $MC2 \rightarrow 1$ Alarm Upgrade to achieve full Category MC1 status, then the upgrade alarm equipment shall take priority over the original alarm equipment when installed.

- 18. It is recommended that wherever possible, Insurers do not discriminate between systems in the same Category. Each system has the same minimum achieved level of security, meeting the Criteria. Members of the Public may choose higher feature/specification systems as appropriate for their circumstances.
- 19. The List is generally updated every three months.
- 20. Listed systems generally attract insurance premium discounts from many insurers. Some insurers may refuse to offer theft cover if no system is fitted. The level of discount and the recognised categories of system varies from insurer to insurer. Discounts may vary from 2% to 25%, with averages of about 5 15%.

Thatcham listed security systems exceed the requirements of European Union legislation and the British Standards Institute and are specifically designed to meet the higher requirements demanded by UK Insurers.

Issue 110

PART II (a) WHEEL LOCKING DEVICES FOR ORIGINAL EQUIPMENT - Category 4

(UK Market Only)

- under concession/review

- production parts to be validated
